

The *NAS*ti** 215s is a solid powerful speaker, Capable of reproducing the bottom end of the audio frequency spectrum for live sound or recorded music at high volumes in a crystal clear manner.

Housing a pair of front loaded, front facing 650Wrms 15" drivers with a 4" voice coil, it has a sensitivity of 98dBspl at 1 Watt at 1m which means that it will run continuously at 129dBspl and can handle peaks of 132dBspl. So it has the potential to be gut wrenchingly loud but more importantly it sounds good.

Standing 100cm tall with a 50cm by 60cm footprint this unit takes surprisingly little space and generates a lot of good quality sound.

Superbly paired to the *NAS*ti** 2D12 full range speaker you can combine the stack to project sound across a football field and still sound clear.

We at NAS love the 215s but don't take our word on it – come and have a listen.
