

The *NAS*ti** 2D12 is a slender space efficient speaker capable of reproducing speech, live sound or recorded music at high volumes in a crystal clear manner.

Housing a pair of 400Wrms 12" driver and a 45w 1" HF compression driver it has a sensitivity of 100dBspl at 1 Watt at 1m which means that it will run continuously at 129dBspl and can handle peaks of 132dBspl. So it has the potential to be ear splittingly loud but more importantly it sounds good.

Standing 90cm tall with a 40cm by 40cm footprint this unit takes little space and generates a lot of good quality sound.

Superbly paired to the *NAS*ti** 215s bass speaker you can combine the stack to project sound across a football field and still sound clear.

We at NAS love the 2D12 but don't take our word on it – come and have a listen.
